Before you choose

A good idea only becomes a good product when the price works. For every piece on this list:

- Print a sample and write down the real **weight, time and finishing**.
- Calculate the cost and price per channel in **Nivela 3D**. If the margin doesn't work, adjust the model or the channel.
- Use **your own designs, public-domain models or models with a clear commercial license**. Buying or downloading a file doesn't always give you the right to sell the print — and on Etsy, 3D printed items must be your own original design.
- **No characters, teams, brands or logos** from others without permission.

How to test a new idea

- Post the sample on Instagram and Facebook before producing in quantity. If nobody asks, adjust the photo, price or product.
- Start made-to-order: only print after the order is paid.
- After 30 days, check in Nivela 3D which pieces made the most profit (not just the most sales) and invest in those.
- Holidays need planning: start promoting 3 to 4 weeks ahead.
